

Pole Tent Setup Instructions

1. Lay tent flat in desired location (top of tent facing up.) Get tent as square as possible.
2. Drive stakes 5' out from the edge of tent at each grommet. You should drive the stakes $\frac{3}{4}$ ways into the ground
3. Tie corresponding rope, loosely, to each stake.
4. Insert side poles in corners and raise, so the bottom of side poles slant toward the center of tent.
5. Insert center pole into center grommet and raise to an upright position
6. Insert remaining side poles, tighten all rope and stand side poles to an upright position.
7. Adjust side poles and center pole(s) to an upright position. Be sure rope tension is taut. If you are having a difficult time getting rope taut, angle the side pole (so the bottom is facing toward the middle of tent) and re-tie the rope and tight as possible. Next, stand the side pole upright. This will give you a nicely taut rope.
